

QR Code Creating

Did you know that you can create a personalized, scannable QR code that links directly to your fundraising page? Follow these three easy steps to do it and share with supporters!

After your fundraising page is fully set up and customized, navigate in your browser to your public fundraising page.

Right click anywhere on your fundraising page to open up a small menu of options. You will then select “Create a QR Code for this page” (highlighted in yellow).

Your QR code will pop up in the top right corner with the option to download the code as a PNG file. Once you click download, the PNG file will automatically begin to download. You can then use this PNG (like below) in posters, flyers, letters, and more for donors to easily scan and access your page!
